## ARIZONA-SONORA DESERT MUSEUM PLANT CARE INFORMATION

### **Mescalito** *Agave felgeri*

**DESCRIPTION:** Mescalito is a rare and scattered species of coastal areas and plains in Sonora, Mexico. It grows in very xeric (dry) conditions. A quick grower, the thin-leaved rosettes reach 18” tall. It pups profusely and makes a tight clump. At maturity (7-15 years), an individual rosette of Mescalito sends up a 2 to 8 foot tall spike of yellow flowers. That rosette will then die, but the pups live on.

**RECOMMENDED USE:** Good for containers, rock gardens, succulent gardens, and enhanced desert landscape or xeriscape.

## CULTURE:

**Hardiness:** At least to lower 20's.

**Sun tolerance:** Full sun to light shade for best growth.

**Watering and feeding:** Careful not to overwater. Feed twice a year in containers.  
No fertilizer necessary when planted in the ground.

**Soil requirements:** Use a fast-draining potting soil in containers. Sandy soil is best in the ground.

**Pruning:** Only to remove rosettes which have bloomed and died.
